

 Prof. Dr.-Ing. B. Falter

 Dipl.-Ing. F. Holthoff

Numerical Modeling of the IKT-Pipe Jacking Simulator ND 1600

Working Group for Structural Analysis and Computer Science

 - Preliminary Report -

Client:  IKT – Institute for Underground Infrastructure

Contractor:  University of Applied Sciences Department of Civil Engineering

1 / 10 Febr. 14-2007

 Prof. Dr.-Ing. B. Falter

 Dipl.-Ing. F. Holthoff

Research Goals

Assistance for experimental work to

- explain measurement phenomena like displacements and jacking forces,
- plan further steps and
- define needs of additional measure data

Finite Element Method is applicable for the explanation of

- coupled pipes displacement phenomenon,
- stress distribution in intermediate layers including non linear geometrical and physical behavior and
- forces and friction between pipe and soil

2 / 10 Febr. 14-2007

 Prof. Dr.-Ing. B. Falter

 Dipl.-Ing. F. Holthoff

1. Description of the Finite Element Model

Springline, left Springline, right

Fig. 1 Symmetric Finite Element Model with dimensions of the IKT-Pipe Jacking Simulator: ND 1600, L = 16.2 m

1. Description of the FE-Model

 2. First results Load case „Curve“

 3. Conclusion

3 / 10 Febr. 14-2007

4 / 10 Febr. 14-2007

 Prof. Dr.-Ing. B. Falter

 Dipl.-Ing. F. Holthoff

2. First result, Load case „Curve“

Numerical Modeling of the IKT-Pipe Jacking Simulator ND 1600

1. Description of the FE-Model

 2. First results Load case „Curve“

 3. Conclusion

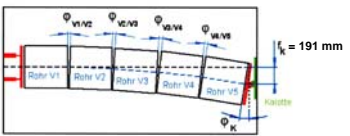

Fig. 3 Pipe arrangement for load case „Curve“

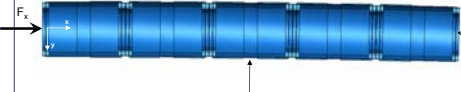

Fig. 4 Finite Element Model for load case „Curve“

5 / 10 Febr. 14-2007

 Prof. Dr.-Ing. B. Falter

 Dipl.-Ing. F. Holthoff

Numerical Modeling of the IKT-Pipe Jacking Simulator ND 1600

1. Description of the FE-Model

 2. First results Load case „Curve“

 3. Conclusion

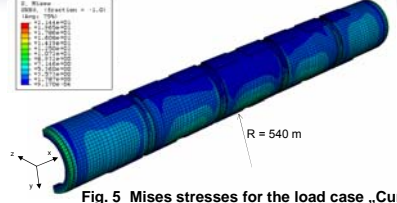

Fig. 5 Mises stresses for the load case „Curve“ (scaling factor 1)

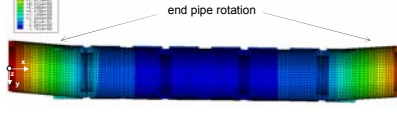

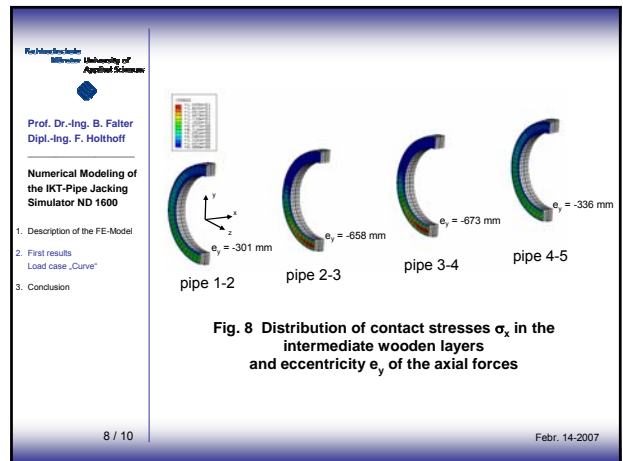

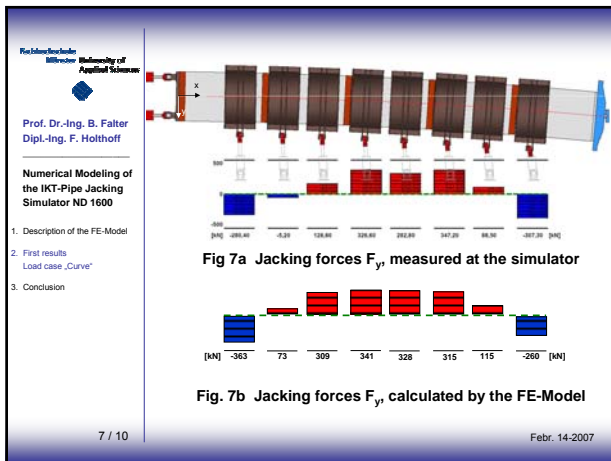

Fig. 6 Deformations in y-direction (scaling factor 15)

6 / 10 Febr. 14-2007

 Numerical Modeling of
 the IKT-Pipe Jacking
 Simulator ND 1600
 1. Description of the FE-Model
 2. First results
 Load case „Curve“
 3. Conclusion

3. Conclusion

3.1 Recommendations for further experiments

- Look for equilibrium $\sum F_y = 0$ in the horizontal direction
- Deformations and flexibility due to transversal loads F_y
- Evaluate angle differences and gaps width between neighbouring pipes
- Measure orthogonality of the pipe end planes after dismantling the simulator

3.2 Phenomena in real pipe jacking situations

- Eccentricity of the axial forces and rotation of the end pipes in curves
- Bedding reactions of the end pipes in the surrounding soil
- Friction caused by these reactions to be added to the total jacking force $\sum F_x$

9 / 10 Febr. 14-2007
